

Developed to optimize the way companies do business

ABACLIK
by Abacus

Smartphone App to collect, organize, and share expenses, work times, absences, services, travel costs and employee data

One app, many functions, intuitive in use

The AbaCliK business app makes it possible to collect information of all kinds (services, working time, expenses, insight into the personnel dossier), to assign projects or customers and to synchronize them with Abacus Business Software with just the touch of a finger. In addition to time and cost savings, the use of AbaCliK also contributes to compliance with legal guidelines, such as the obligation to record working hours. AbaCliK can be downloaded free of charge for iOS and Android in the Apple App Store and in the Google Play Store and can be used without registration. Charges apply only when synchronizing with Abacus Business Software.

Expense entry without paper chaos

With AbaCliK you can photograph expense receipts and supplement with information such as expense type, project, payment type, or comments. Documents are digitally signed by the software and must not be stored.

Service entry via bar code or timer

Branch-independent service entry allows work hours, mileage and other types of work to be entered for a project or a customer while on the go. The services can be entered manually, via bar code, or by using a timer.

In & Out: Work time recording

Swiss law requires that working times be recorded. This can be done manually or automatically in AbaCliK using RFID (Android), bar code, or GPS technology. The app records when employees enter or leave their place of work (only possible when recorded via GPS).

Privacy is protected

With AbaCliK, each employee can decide for themselves which data will be shared or synchronized with the ERP software.

AbaCliK supports and digitalizes various work processes in the following languages: German, French, English, Spanish, Italian, and Portuguese. The app also functions when there is no internet connection available. All information can be entered offline and later synchronized with Abacus Business Software as soon as there is access to the internet.

ESS: Personnel management of the future

The Employee Self Service function allows employees to independently modify their address or civil status in AbaCliK as well as apply for absences, holiday, or child allowances. The employer has the possibility to send payroll settlements or wage statements directly to employees.

Timesheet tile

The new 'Timesheet' tile makes it possible to report work times for a project directly and on time. During the development of this function, special attention was paid to recording a time entry with as few entries as possible.

Enter, approve, and invoice travel costs

Trips are created directly in AbaCliK then checked and approved by a superior with just a few clicks. Lump-sum or actual costs are selected and added to a trip.

Your advantages

Optimise your business processes with AbaClik and be fully digital and mobile!

- ✓ Save administrative work, time, and costs
- ✓ Paper chaos, consumption, and multiple copies become obsolete
- ✓ Continuous digital and lean business processes
